

CORE N.V. is a major and steadily growing ANSI/TIA 942-C rated 3 certified Datacenter providing a wide variety of services to its customers. Our organization offers services such as Private Cloud Services and Co-location, Business Continuity Management, Network & Server Management, Consultancy and Training.

CORE N.V. is further expanding its Support & Services team to better suit the needs of its various clients. Therefore, we are looking for enthusiastic professionals for the following position:

Systems Engineer

Job description

The Systems Engineer is directly responsible for the installation, support and management of the technology infrastructure by proactively administering and optimizing servers, computer hardware/software, data archiving, backup/recovery. The daily responsibilities for this position include, but are not limited to, infrastructure support, network support, user support, hardware and software support.

Profile

The candidate possesses several of the following qualifications:

- Bachelor's degree in computer science or similar
- Minimum of 3 years of related technical experience
- Microsoft Certified Professional (MCP) certification (Windows Server 2019 or newer preferred)
- Proven experience with Microsoft 365 implementations, migrations, and administration solid knowledge of Remote Desktop Services (RDS)
- Experience with Endpoint Detection and Response (EDR) and security best practices
- Hands-on experience with virtualization platforms, preferably VMware or Hyper-V

- Hands-on experience managing enterprise firewall, VPN configurations and VLAN management
- Strong understanding of backup and disaster recovery solutions (e.g., BaaS concepts)
- Familiarity with cloud environments and infrastructure concepts (IaaS)
- Microsoft Azure experience is considered a strong advantage
- Understanding of ITIL principles and service management processes
- Strong analytical and systematic troubleshooting capabilities
- Strong interpersonal and communicative skills including excellent customer service and organizational abilities

What do we offer?

- Attractive work environment and a professional yet collegiate work atmosphere
- Possibility to attend training and workshops, to obtain certificates and learn from the knowledge and experience of colleagues
- Our terms of employment are determined based on our remuneration structure and depend on the degree to which the profile and job requirement are met.
